

# HYWAX @ EURPASPHALT & EUROBITUMEN – VIENNA

Hywax will present, among the other products, the signature additive for all asphalt mixtures – Hybit® .

Hybit® reduces processing temperatures, reduces the abrasion of the asphalt layer and increases the lifespan of pavements; but these are just some of the qualities of this super versatile additive. When added to the warm mix asphalt, Hybit® significantly reduces CO2 emissions and overall energy consumption, fumes and aerosols while also reducing bitumen aging and machines wearing. Hybit® is paving the road to sustainability and to better roads.
